Vasilika Klimova

Software Engineer

I prefer not only to develop Products but to understand the idea behind them, find the solution, make things done respecting deadlines and minimize tech debt. On calls with managers, I prefer to clarify how we can maximize the product's value with new ideas or good UX. As a Team Lead, I care about team atmosphere. At my IT agency, I negotiate with clients and developers. I know how to give proper feedback to developers and deliver a product that makes customers happy. I like to explain complex things in simple words and help processes be more efficient.
